Erratum — Technical Report of the Multi-Camera Fall Dataset

Prepared by: *Miao Feng, Jean Meunier*

Date: *Nov. 28, 2025*

Introduction

The Multiple-Camera Fall (MCF) dataset and its accompanying technical report have been valuable resources for research within our laboratory. During continued use and validation, we identified several documentation inconsistencies, most notably regarding frame-delay values, reference cameras, and temporal-segmentation frame ranges. To ensure accurate interpretation and support future research using this dataset, the following erratum provides corrected values for clarity and consistency.

1. Overview of Issues

- Frame delay values of camera 5 for scenario 5.
- Camera reference 10 and 11 inside tables at pages 17-22.
- Period segmentation boundaries inside tables at pages 17-22.

2. Detailed corrections

- **Frame delay**

Page	**Scenario**	**Camera**	**Original value**	**Corrected value**
p. 16, Fig. 3	5	5	18 7	18

- **Camera reference**

Page	**Original camera reference**	**Corrected camera reference**
All tables of p. 17-22	11	8
All tables of p. 17-22	10	7

- **Scenario-specific period starts and ends**

Page	Scenario	Reference camera	Original values	Corrected values
p. 17	2	4	308–374 375–399 400–600	308–394 395–425 426–600
p. 17	7	6	330–475 476–507 508–680	330–490 491–520 521–680
p. 18	8	4	144–270 271–298 299–380	144–350 351–380 381–520
p. 18	14	6	372–555 556–590 591–856 857–934 935–988 989–1023 1024–1115	372–590 591–620 621–929 930–969 970–1019 1020–1060 1061–1115
p. 19	18	6	301–378 379–430 431–530 531–570 571–601 602–740	301–480 481–520 521–655 656–684 685–710 711–740

3. Notes for Dataset Users

- These corrections apply to technical report only, raw video data remains unchanged.
- Researchers performing scenario segmentation or synchronization should use this erratum to avoid misalignment.
- This clarification is recommended for all future work based on the MCF dataset.
